

LA3220-B Series

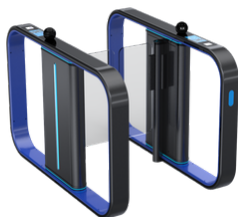

Automatic Speed Lanes

The Automatic Speed Lanes offers a reliable, secure, and smooth access control solution for busy entrances.

Engineered for performance in high-traffic environments, it seamlessly manages bidirectional flow while supporting a wide range of access authentication methods.

KEY BENEFITS:

- Smooth, reliable operation delivers low-noise, stable performance in high-traffic environments.
- Enhanced access security prevents unauthorised entry with anti-tailgating and anti-reverse functions.
- Automatic locking function resets and secures the turnstile after each authorised passage.
- Multi-system integration ready supports RFID, QR, biometric, and face recognition access.
- Clear LED status indication provides instant visual guidance for valid and invalid access.
- Standard height of the baffle is 900mm from the floor.
